Create · Papers · Schedule · Lock · Check · Publish

Who this is for

You and the Academic master create exams, schedule them, lock the plan, approve, and publish. Teachers can add papers and enter marks. The Academic master is the one who verifies marks. School admin and invigilators can open the list, papers, and seats. They do not create exams or publish results.

Set up the academic year, classes, subjects, rooms, and teachers before exam week. Marks are entered on **Grades**, not on this page. This page builds the exam and releases the results.

Open the page

- 1 Sign in with your Headmaster email or phone.
- 2 If you have more than one school, pick the school first (Schools).
- 3 Click **Exams**. The subtitle is “Exams and papers for the selected year.” The year chip at the top opens on the current year.

What you see

Part of the screen	What it is for
Year	Shows exams for that year only. Current year is marked.
Search	Filters by name, type, term, class, or status as you type.
Create exam	Opens the form for a new exam.
Exam row	Name, type, term, start, end, and class. A chip shows the status. A second chip says Schedule locked after you lock.
Papers (n)	Opens the papers for that exam. The number is how many papers it has. Papers (0) stays clickable so you can add the first one.
Pen and trash	Edit the exam, or delete it. These stay available even when the exam has no papers.

A grey button does nothing when you click it. Rest the pointer on it. The tooltip says why: no paper yet, no marks yet, no schedule yet, or the schedule is locked.

Create an exam

- 1 Click **Create exam**.

- 2 Choose the year. Term can stay **None**.
- 3 Choose one class, or **All classes**. All classes creates one exam per class. Each class keeps its own papers and marks.
- 4 Name it (Midterm is the suggested name). Set start and end dates. The end date must be on or after the start date.
- 5 Choose **Type** (see below).
- 6 Click **Create exam** and confirm.

The pen icon edits that exam. You can change year, term, class, name, type, and dates. Edit is for one class. It does not offer All classes.

Type

Type is how this exam counts on the report. The exam row shows that type under the name.

Type	How it counts
MIDTERM	The midterm score. It is 10% of the semi-terminal result.
SEMI_TERMINAL	The semi exam. It is 90% of the semi-terminal result.
TERMINAL	The end-of-term exam. The term result is half the semi-terminal result and half this exam.
OTHER	Stored on the exam. It is not one of those three report parts.

Add a paper

A paper is one subject sitting: Maths, English, and so on. Seats are the places for the students in that sitting. You add papers first. Seat numbers appear after Schedule.

- 1 On the exam row, click **Papers (0)** or **Papers (n)**.
- 2 Click **Add paper**.
- 3 Choose the subject. Max and pass are required. They start at 100 and 40.
- 4 Choose an **Invigilator**. This is required. The invigilator is the person supervising that sitting. The list is your teachers. A teacher who teaches the subject and the invigilator on the day can be different people.
- 5 Room, date, start, and end are optional. Room is a dropdown of rooms from Academics → Rooms. Choose **No room** if you will let Schedule pick one. If the room list is empty, add rooms under Academics first.
- 6 Click **Add paper** and confirm. One subject can appear only once on the same exam.

The pen on a paper edits it. The trash deletes it. Delete is refused if that paper already has marks, or if the exam is published. Unpublish first, and clear those marks, then delete.

While the schedule is locked, Add paper, edit, and delete are hidden. Unlock the exam before you change papers.

Schedule

Schedule builds the sitting plan and the seat numbers. It does not enter marks and it does not change Draft, Verified, or Published.

1 Add at least one paper. Schedule stays grey until then. The tooltip says “Add a paper before using this”.

2 Click **Schedule** and confirm “Auto-schedule papers”.

3 Open **Papers**. The Schedule table shows subject, date, time, room, and invigilator.

For a paper that does not yet have a date and a start time, Schedule walks the exam from the start date:

- Morning 08:00–10:00, then afternoon 11:00–12:30, then the next weekday. Saturday and Sunday are skipped.
- The date never goes past the exam end date.
- The room is a classroom that can hold the active students in that class. If the school has no rooms, the room is Hall A.
- The invigilator is taken from the teacher list, in turn, so two papers at the same time do not share a person or a room.

A paper that already has a date and a start time keeps that date, time, room, and invigilator. Schedule still rebuilds the seat numbers for it. Run Schedule again to replace the plan. You cannot run it while the exam is locked.

Seat numbers are only saved by Schedule. They are S-01, S-02, and so on, for active students in the exam's class. The exam is for the whole class, not one section.

See the plan and the seats

1. Click **Papers**. The Schedule table is at the top of that window.
2. Click **Seats** on a paper.
3. After Schedule, you see seat, admission number, and student.
4. Before Schedule, you see the active students in the class, and a note that seat numbers are saved when you run Schedule.

The class timetable (lessons) is a different screen. The exam plan lives here, inside Papers.

Lock and unlock

Lock

Grey until every paper has a date and a start time. Hover says “Schedule the papers before locking” until then. After lock, the row shows Schedule locked. Papers cannot be added or edited. Schedule stays grey until you unlock.

Unlock

Replaces Lock while the plan is locked. Confirm unlock. Papers can be changed again, and you can run Schedule again.

You can lock a draft. Lock does not publish results. It only freezes the sitting plan.

Marks, checking, and publish

Do this after the papers exist. Schedule and lock can come before or after marks. The result steps themselves follow this order. A later button is hidden until the exam reaches that status. It is not a grey button you are meant to force.

1 On **Grades**, enter marks for the exam. Send for checking stays grey until at least one mark exists. Hover says "Enter marks on Grades before sending for checking".

2 Click **Send for checking**. This does not save marks. It asks the Academic master to look. Marks can still be changed until the exam is verified. The status becomes Entered.

3 The Academic master clicks **Verify**. You do not see Verify. After that, marks are frozen and the status is Verified.

4 Click **Approve**. It appears only when the status is Verified.

5 Click **Publish**. It appears only when the status is Approved. Students and parents can then see the results.

Reject appears once the exam has been sent for checking. It returns the exam to the teacher. If results were published, Reject also hides them. The note "Returned for correction" shows under the row. Send for checking is available again after new marks, labelled as sending again.

Unpublish hides results from students and parents without returning the exam to the teacher. The status stays Approved until you publish again.

Delete an exam

1. If it is published, click **Unpublish** first.
2. Remove marks for that exam on Grades.
3. Click the trash icon and confirm.

Delete also removes the papers and the seat numbers. It is refused while the exam is published or while any mark remains.

Typical week

Job	Clicks
One exam for every class	Create exam → All classes → Create exam
One subject paper	Papers → Add paper → subject, max, pass, invigilator → Add paper
Build the sitting plan	Schedule → Papers, to read the Schedule table
See who sits where	Papers → Seats on that subject
Stop changes to the plan	Lock
Change a locked plan	Unlock → edit the paper or Schedule again
Ask for a check	Grades (enter marks) → Send for checking
Release results	After the Academic master verifies → Approve → Publish
Hide results	Unpublish, or Reject if the teacher must correct them

If something fails

What you see	What to do
Grey button	Hover it. Add a paper, enter marks, schedule, or unlock, as the tooltip says.

What you see	What to do
No exams for this year	Check the year chip, or create the exam.
Add a class for this year	The year has no classes. Create them under Academics, then create the exam.
No rooms in the dropdown	Add rooms under Academics → Rooms. You can still save with No room.
No invigilator to choose	Add a teacher first. A paper cannot be saved without one.
Schedule does nothing useful	Open Papers. The Schedule table is there. Seats shows numbers only after Schedule has run.
Seats lists students but no S-01	Those are the active students in the class. Run Schedule to save seat numbers.
Cannot lock	Every paper needs a date and a start time. Run Schedule, or type them on each paper.
Approve or Publish is missing	That is expected until the previous step is done. Verify (Academic master), then Approve, then Publish.
Cannot delete	Unpublish first if it is published. Remove marks, then delete.
