

ShuleHub Grades menu

Headmaster guide · How to enter exam marks, freeze them, and read term results

Sign in as Headmaster → left menu → **Grades**

Exam grid · Save · Excel import · Freeze at Verify · Term results

Who this is for

Headmaster, Academic master, and Teacher can open Grades and enter marks while the exam is unlocked. School admin, students, and parents do not see this menu. Students and parents see published results on report cards and their home, not this grid.

Grades is the mark book. Exams is where you create the sitting, send marks for checking, verify, reject, approve, and publish. You cannot create an exam here. You cannot verify an exam here.

Contents

8. Letters and pass marks
9. Typical jobs
10. If something fails

How this page fits with Exams

Academics (year, class, subject, grading bands) → Exams (exam + papers) → Grades (marks) → Exams (check / verify / approve / publish) → Report card

You want to...	Menu
Create the exam, add papers, schedule seats	Exams
Type or import marks for one paper	Grades
Send for checking, Verify, Reject, Approve, Publish	Exams
See a combined midterm / semi / terminal score	Grades → Term Results
Change A–F bands or result weights	Academics → Grading / Results

Each exam paper (subject) has its own grid. Form 1 Midterm Maths is not the same grid as Form 1 Midterm English.

Open the page and pick a paper

- 1 Sign in. Open the correct school if you can switch schools.

2 Click **Grades**. The heading is Grades. The subtitle is “Exam marks”.

3 Choose an **Exam**. The list shows name, class, and status (DRAFT, ENTERED, VERIFIED...).

4 Choose a **Subject**. The subject must be a paper on that exam. If you pick a subject that is not on the exam, the grid fails.

Until both boxes are set, the card says “Pick an exam and subject.” The grid lists active students in that exam’s class, not one section.

The marks grid

Above the table: subject average, max marks, and pass marks from the paper. Search filters the rows by student name, admission number, or letter.

Column	What you see
Adm	Admission number.
Student	Name.
Marks	While unlocked: a number box. While frozen: a bold label (or — if empty). No box to click.
Grade	Letter from this school's grading bands, from the percentage of max marks.
Pos	Class position among students who have a mark. Empty rows have no position.
Trash	Shown only when that student has a saved mark and the exam is not frozen. Confirms before delete.

Typing in a box does not save yet. Position and average update after **Save grid** or a successful import.

Save, delete, and search

1 Type marks. A mark must be from 0 up to that paper’s max (usually 100).

2 Click **Save grid** and confirm. Only rows with a number are sent. Empty boxes stay empty.

3 To remove one student’s marks, use trash on that row. Confirm “Delete marks for ...?”.

Save needs at least one number. The success line is “Marks saved. Positions and averages updated.”

Leave a cell blank if that student has not sat yet. Do not type 0 unless they scored zero.

Excel template and import

Use this when you already have marks in a spreadsheet. Download the template from this same exam and subject so admission numbers match the class.

- 1 Pick exam and subject.
- 2 Click **Download Excel template**. Columns are Admission number, Student name, Marks.
- 3 Fill the Marks column. Keep admission numbers as they are.
- 4 Click **Import Excel**, choose the .xlsx file, and confirm. Marks in the file replace saved marks for those students. Blank mark cells are left unchanged.

Import is refused while frozen, if the file is not Excel, if the sheet is empty, or if the header is not Admission number and Marks. A row whose admission number is not in this class is reported as a problem.

When marks freeze

Marks freeze the moment Headmaster or Academic master clicks **Verify** on Exams. They stay frozen through Approve and Publish. They do not freeze at Send for checking.

Exam status	On this page
DRAFT	Number boxes. Save, import, and trash work.
ENTERED	Still boxes. You can still correct marks before Verify.
VERIFIED, APPROVED, PUBLISHED	Gold note: "Marks are frozen after verification." Each mark is a label, not a box. Trash is hidden. Import and Save grid are grey. The server also refuses those actions.
REJECTED	Boxes come back. Fix marks, save, then Send for checking again on Exams.

To unlock: Exams → **Reject** (Headmaster or Academic master). Then reload Grades. Unpublish hides results from families but does **not** unlock the grid.

Download Excel template still works while frozen, so you can keep a copy. Import does not.

Term results

The gold **Term Results** button (top right) is not the exam grid. It opens a form, then a second table of combined scores for a class and subject.

- 1 Click **Term Results**.
- 2 Year defaults to the current year. Term can stay **Whole year**, or pick one term.
- 3 Pick class and subject. Click Term Results in the form.

Default math (change weights on Academics → Results):

- Semi-terminal result = midterm × 10% + semi exam × 90%.
- Term result = that semi-terminal result × 50% + terminal exam × 50%.

An exam not yet taken is left out of that student's mix. The table columns are Midterm, Semi exam, Semi result, Terminal exam, Term result, Grade. Search works on this table too. This view is read-only. You do not type marks here. Assignments are not in this math. Official term results come from exam components only.

Letters and pass marks

The letter on the grid is this school's grading bands (Academics → Grading), from the student's mark as a percentage of the paper max. Pass / fail on the paper uses the paper's pass mark (set when you added the paper on Exams). Those two ideas can differ: a school can give a D that still "passes" the paper, or the other way around, depending on bands and pass mark.

Typical jobs

Job	Clicks
Enter one paper by hand	Grades → exam → subject → type marks → Save grid
Enter a class from Excel	Download Excel template → fill Marks → Import Excel
Correct one student before checking	Change the box → Save grid
Remove one student's marks	Trash on the row → confirm
Send the paper for checking	Exams → Send for checking (needs at least one saved mark)
Lock the mark book	Exams → Verify. Reload Grades. Boxes become labels.
Unlock after a mistake	Exams → Reject → Grades → edit → Save → Exams → Send for checking → Verify
See combined term scores	Term Results → year, class, subject

If something fails

What you see	What to do
Pick an exam and subject	Choose both dropdowns. The grid will not load on exam alone.
Subject is not part of this exam	Add that subject as a paper on Exams, or pick a subject that is already a paper.
Enter at least one mark	Save grid ignores empty boxes. Type a number first.
Marks must be between 0 and ...	Do not exceed the paper max. Check the Max line above the table.
Marks are frozen after verification	Expected after Verify. Reject the exam on Exams to unlock.
Save / Import grey, marks are labels	The exam is Verified, Approved, or Published. That is the freeze.
No students match that search	Clear the search box.
The spreadsheet needs columns Admission number and Marks	Use the downloaded template. Do not rename those headers.
Admission number ... is not in this class	That row is not an active student on this exam's class. Fix the number or skip the row.
Choose an Excel file / spreadsheet is empty	Use a .xlsx file with at least a header and one data row.
Term Results asks for year, class, and subject	Those three are required. Term can stay Whole year.
Grades menu is missing	Only Headmaster, Academic master, and Teacher see it.

Icons and confirms

- Trash = delete one student's marks (unlocked exams only).
- Save grid, Import Excel, and delete ask you to confirm.
- Frozen marks are labels, not disabled boxes. That is deliberate so the page does not look editable.
